Re: Results of Indoor Air Quality Testing

Dear Mr. Sampson:

This report provides the results of the indoor air quality testing conducted by LeRoy-Ostrander Public School. The scope of our services was conducted in accordance with our email correspondence dated January 20, 2017.

Summary of Results

Carbon Dioxide, Carbon Monoxide, Temperature, Relative Humidity

A continuous measurement over an approximate 24-hour time period was conducted in various locations within the school on February 15-17, and 21-22, 2017. The following provides a summary of the measurement results by parameter on each day.

February 15th – Rooms 1, 8, 179, and 205

- The average carbon dioxide levels measured ranged from 557 to 663 parts per million (ppm) in air. The carbon dioxide levels measured ranged from 407 to 1,405 ppm in air.
- The average carbon monoxide levels measured ranged from 0.0 to 0.5 ppm in air. The carbon monoxide levels measured ranged from 0.0 to 1.4 ppm in air.
- The average temperatures measured ranged from 68.7 to 72.2 degrees Fahrenheit (°F). The temperatures measured ranged from 67.1 to 74.1 °F.
- The average relative humidity levels measured ranged from 16.5 to 22.2 percent (%). The relative humidity levels measured ranged from 14.0 to 28.0 %.

February 16th – Rooms 9, 6, 203, and Gym

- The average carbon dioxide levels measured ranged from 681 to 760 ppm in air. The carbon dioxide levels measured ranged from 428 to 1,592 ppm in air.
- The average carbon monoxide levels measured ranged from 0.0 to 0.4 ppm in air. The carbon monoxide levels measured ranged from 0.0 to 0.8 ppm in air.
- The average temperatures measured ranged from 69.9 to 73.3 °F. The temperatures measured ranged from 66.7 to 76.1 °F.
- The average relative humidity levels measured ranged from 20.8 to 23.0 %. The relative humidity levels measured ranged from 16.3 to 29.0 %

February 17th – Rooms 7, 4, 104, and 202

- The average carbon dioxide levels measured ranged from 651 to 747 ppm in air. The carbon dioxide levels measured ranged from 413 to 1,839 ppm in air.

- The average carbon monoxide levels measured ranged from 0.0 to 0.4 ppm in air. The carbon monoxide levels measured ranged from 0.0 to 0.6 ppm in air.
- The average temperatures measured ranged from 68.7 to 72.3 °F. The temperatures measured ranged from 66.5 to 75.6 °F.
- The average relative humidity levels measured ranged from 21.7 to 29.8 %. The relative humidity levels measured ranged from 17.5 to 39.9 %

February 21st – Rooms 10, 5, 103, and 201

- The average carbon dioxide levels measured ranged from 439 to 649 ppm in air. The carbon dioxide levels measured ranged from 403 to 1,478 ppm in air.
- The average carbon monoxide levels measured ranged from 0.0 to 0.6 ppm in air. The carbon monoxide levels measured ranged from 0.0 to 1.3 ppm in air.
- The average temperatures measured ranged from 68.9 to 75.6 °F. The temperatures measured ranged from 65.6 to 79.6 °F.
- The average relative humidity levels measured ranged from 25.8 to 36.0 %. The relative humidity levels measured ranged from 20.9 to 42.8 %

February 22nd – Rooms 3, 02, 102, and 301

- The average carbon dioxide levels measured ranged from 489 to 716 ppm in air. The carbon dioxide levels measured ranged from 400 to 1,580 ppm in air.
- The average carbon monoxide levels measured ranged from 0.0 to 0.6 ppm in air. The carbon monoxide levels measured ranged from 0.0 to 1.0 ppm in air.
- The average temperatures measured ranged from 70.2 to 81.0 °F. The temperatures measured ranged from 67.6 to 85.5 °F.
- The average relative humidity levels measured ranged from 20.4 to 34.8 %. The relative humidity levels measured ranged from 14.4 to 40.2 %

Refer to Appendix A attached which provides the actual measurement data print-outs for each location.

Methodology

Carbon Dioxide, Carbon Monoxide, Temperature, Relative Humidity

The measurements for the specified parameters were made using TSI Model 8554 Q-Trak Plus Indoor Air Quality Monitors. The levels were continuously measured and logged on 15-minute time intervals.

Discussion

Carbon dioxide is a natural by-product of human respiration and is one of the components associated with vehicle or truck exhaust. The level of carbon dioxide serves as a good indicator (i.e., screening tool) of the air quality in an office or school-type environment relative to the amount of fresh outside air being brought into the occupied zones. As a rule-of-thumb, typical carbon dioxide levels outdoors are around 300 to 350 ppm. It is assumed that by maintaining the levels of carbon dioxide below 1,000 ppm in an indoor environment (i.e., adequate volumes of fresh outside air is being distributed into the office areas relative to the occupancy density), the number of indoor air quality complaints will be minimized. Secondly, by bringing in adequate volumes of fresh outside air, the potential presence of any indoor air contaminants will be more effectively diluted. In buildings where there is inadequate volumes of fresh outdoor air being brought in and/or the occupancy density is too high relative to the ventilation system

capacity, individuals will likely experience lethargy as the workday progresses. For comparison purposes, the current Minnesota Occupational Safety and Health Administration (OSHA) permissible exposure limit (PEL) for carbon dioxide is 10,000 ppm. The PEL is defined as the maximum 8-hour, time-weighted average concentration to which an employee may be exposed to. Based on the measurement results (refer to Appendix A), the average level of carbon dioxide level measured during the primary occupancy hours for the school exceeded the recommended guideline of 1,000 ppm in the following locations.

- Room 1 – 9:00 a.m. and periodically throughout the remainder of the day.
- Room 8 – 9:15 a.m. to 12:30 p.m. and around 2:24 p.m.
- Room 179 – 9:38 a.m.
- Room 205 – 11:47 a.m. and throughout the remainder of the day.
- Room 9 – 9:19 a.m. and throughout the remainder of the day.
- Room 6 – 9:06 a.m. and throughout the remainder of the day.
- Room 203 – 10:29 a.m. and throughout the remainder of the day.
- Gym – 6:51 to 8:51 p.m.
- Room 7 – 9:08 a.m. and throughout the remainder of the day.
- Room 4 – 1:47 – 2:47 p.m.
- Room 104 – 9:06 a.m. – 1:01 p.m.
- Room 202 – 10:29 a.m. and throughout the remainder of the day.
- Room 10 – 3:38 – 8:08 p.m.
- Room 5 – 10:56 a.m. and throughout the remainder of the day.
- Room 103 – 10:31 a.m. and throughout the remainder of the day.
- Room 3 – 9:39 a.m. and throughout the remainder of the day.
- Room 02 – 1:17 – 1:32 p.m. and 3:47 p.m.

Carbon monoxide is commonly encountered as a by-product of incomplete combustion from such sources as boilers, gas-fired heaters, and both gasoline and diesel-powered engines. The current Minnesota OSHA PEL for carbon monoxide is 35 ppm in air. As referenced in the ASHRAE Standard 62.1 – 2013, the NAAQS as set by the Environmental Protection Agency (EPA) for carbon monoxide is 9 ppm (8-hour average). Based on the measurement results (refer to Appendix A), the average level of carbon monoxide measured fell below the referenced standards in all of the test locations.

In regards to comfort conditions within indoor office spaces, OSHA recommends indoor temperatures in the range of 68 to 76 °F. As referenced in ASHRAE Standard 55, the recommended temperature ranges for normal human comfort purposes are 68 to 74 °F during the winter months and 73 to 79 °F in the summer months. It should be noted that a wide variance in thermal comfort between individuals is common and it is often very difficult to accommodate everyone from a facility operations standpoint. Based on the measurement results (refer to Appendix A), the average temperatures measured fell within the recommended comfort range in all of the test locations with exception to the following:

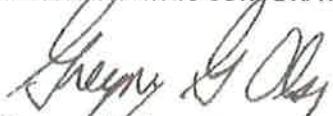

- Room 103 – temperatures exceeded 76 °F at 10:31 a.m. and throughout the remainder of the day.
- Room 02 – temperatures exceeded 76 °F throughout the day.
- Room 102 – temperatures exceeded 76 °F throughout the day
- Room 301 – temperatures exceed 76 °F at 1:55 p.m. and throughout the remainder of the day.

ASHRAE recommends relative humidity levels indoors be maintained between 30% to 60% when practical for occupant comfort purposes and to minimize the proliferation of fungal organisms. In buildings with no automated humidification system, it is not uncommon to see relative humidity levels fall below 15 % during the winter heating season months. Based on our experience, the number of occupants reporting experiencing dry mucous membranes (eyes/nose/throat), dry skin, and static shocks becomes more prevalent as the humidity levels approach the lower teens or less over sustained periods of time during the winter. In regards to the average relative humidity levels measured (refer to Appendix A) during the primary occupancy hours, the levels are considered to be normal or acceptable relative to the ambient weather conditions at the time.

This report is issued in accordance with our General Conditions (7-18-16). If you have any questions or require further assistance, please call me at 952.995.2482.

Sincerely,

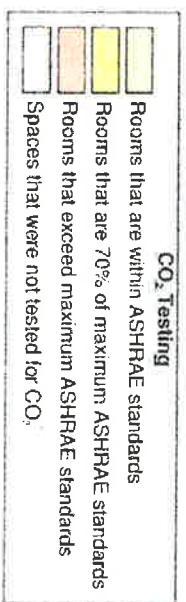

BRAUN INTERTEC CORPORATION

Gregory G. Olson, CIH
Associate Principal - Senior Industrial Hygienist
